

Vital Consulting

Consulting for an Optimal Solution

As a leading provider of advanced visualization software, Vital Images knows that workflow efficiency plays a key role in patient outcomes. Our consulting services provide the technical and clinical expertise necessary to customize our solution to your environment.

We first listen to how you work best and then strategically configure the deployment of Vital Images software to your ideal workflow. Our solutions are scalable, so you can add to or reconfigure your solution as your organization grows and changes. As you launch your new solution, our consultants help you to increase adoption of the technology, recommend improvements to your facility's workflow and help you maximize your investment.

Our consulting team begins by scoping your solution, documenting requirements and establishing a milestone-driven schedule. During implementation, our team will roll out the solution at your facility, educate your staff, and present the project's success to you and your organization, ensuring the solution meets your expectations.

Services

Many of these services are included in your software package. Check with a Vital Images representative at 952.487.9500 for details.
